WHAT IS CLAIMED IS:

1 1. A method, comp	ri	si	n	g:
---------------------	----	----	---	----

- 2 examining start criteria;
- determining whether the start criteria have been met;
- obtaining new email events from an email database after the start criteria have
- 5 been met; and

1

5

- forwarding information corresponding to the new email events via a computer
- 7 network to a database.
 - 2. A system stored on a computer-readable medium, comprising:
- a client configuration engine for determining whether start criteria have been met;
- a retrieval engine, coupled to the client configuration engine, for retrieving email
- 4 events from an email database; and
- a data transmitter, coupled to the retrieval engine, for forwarding information
- corresponding to the new email events via a computer network to a database.
- 1 3. A method, comprising:
- establishing a communications channel with a client computer system;
- 3 receiving information corresponding to new email events from the client
- 4 computer system; and
 - storing the information corresponding to the new email events in a database.
- 1 4. A system stored on a computer-readable medium, comprising:
- a server database manager for establishing a communications channel with a
- 3 client computer system, for receiving information corresponding to new email events
- 4 from the client computer system, and for storing the information corresponding to the
- 5 new email events in a database.

1	5.	A method, comprising:
2		obtaining filter control data;
3		examining email data against the filter control data;
4		determining at least one transfer protocol for the email data based on the
5	exami	nation; and
6		forwarding the email data according to the at least one transfer protocol via a
7	comp	ater network to a database.
1	6.	A system stored on a computer-readable medium, comprising:
2		a filter for examining email data against filter control data, and for determining at
3	least o	one transfer protocol for the email data based on the examination; and
4		a data transmitter, coupled to the filter, for forwarding the email data according to
5	the at	least one transfer protocol via a computer network to a database.
1	7.	A method, comprising:
2		obtaining filter control data;
3		examining email data against the filter control data;
4		determining based on the examination the email data that should not be
5	forwa	rded;
6		generating receipt data identifying the email data that should not be forwarded;
7	and	
8		forwarding the receipt data via a computer network to a database.
1	8.	A system stored on a computer-readable medium, comprising:
2		a filter for examining email data against filter control data, and determining based
3	on the	e examination the email data that should not be forwarded;
4		a receipt generator, coupled to the filter, for generating receipt data identifying the
5	email	data that should not be forwarded; and
6		a data transmitter, coupled to the filter, for forwarding the receipt data via a
7	comp	uter network to a database.

9.	Λ.	method,	compris	hina
9.	м	memoa.	COMBUIS	MILE.
<i>-</i> .		,	I	

storing user preferences on a client computer system;

storing an independently modifiable copy of the user preferences on a server computer system coupled via a computer network to the client computer system;

examining, by the client computer system, a configuration-check schedule;

determining, by the client computer system, whether a configuration check has been scheduled;

establishing, by the client computer system if a configuration check has been scheduled, a communications channel with the server computer system;

determining whether any changes to the independently modifiable copy of the user preferences stored on the server computer system have been made; and modifying, if any changes have been made to the independently modifiable copy,

the user preferences stored on the client computer system according to the changes made.

10. A system stored on a computer-readable medium, comprising:

a client configuration engine for storing user preferences on a client computer system, for storing an independently modifiable copy of the user preferences on a server computer system that is coupled via a computer network to the client computer system, for examining a configuration-check schedule to determine whether a configuration check has been scheduled, for determining whether any changes to the independently modifiable copy have been made, and for modifying the user preferences stored on a client computer system according to the changes made to the independently modifiable copy; and

a communications engine, coupled to the client configuration engine, for establishing a communications channel with the server computer system if a configuration check has been scheduled.

1	11. A method, comprising:
2	storing on a server computer system an independently modifiable copy of user
3	preferences stored on a client computer system, the server computer system coupled via a
4	computer network to the client computer system;
5	enabling modification of the independently modifiable copy of the user
6	preferences on the server computer system;
7	establishing a communications channel with the client computer system; and
8	providing any changes made since a last configuration check to the client
9	computer system.
1	12. A system stored on a computer-readable medium, comprising:
2	a database for storing an independently modifiable copy of user preferences
3	stored on a client computer system, the server computer system coupled via a computer
4	network to the client computer system;
5	a server configuration engine for enabling modification of the independently
6	modifiable copy of the user preferences on the server computer system, for establishing a
7	communications channel with the client computer system, and for providing any changes
8	made since a last configuration check to the client computer system.
1	13. A method, comprising:
2	providing website information offering email forwarding functionality to client
3	computer systems;
4	enabling the client computer systems to request the email forwarding functionality
5	to be downloaded;
6	receiving a request for the email forwarding functionality from a requesting client
7	computer system; and
8	downloading an email forwarding engine to the requesting client computer system
9	for enabling the email forwarding functionality on the requesting client computer system.

1	14.	A system stored or	a computer-readable medium, comprising:
2		website information	n offering email forwarding functionality to client computer
3	system	•	1 11
4		an email forwardir	g engine, coupled to the website information, for enabling the
5	email f	forwarding function	ality on the client computer systems; and
6		a web server for e	nabling the client computer systems to request the email
7	forwar	ding functionality	o be downloaded, and for downloading the email forwarding
8	engine	to a requesting cli	ent computer system.
